

Kelompok :

1. Dafa Ghaita Yogatama
2. Ahmad Rafi'

1. Ubah nilai suhu jadi 33 dan lihat status yang tampil.

```
routes > web.php > ...
1  <?php
2
3  use App\Models\Sensor;
4  use Illuminate\Support\Facades\Route;
5
6  Route::get('/', function () {
7      return view('welcome');
8  });
9  Route::get('/dashboard', function () {
10     return view('dashboard');
11 });
12
13 Route::get('/', function () {
14     $sensor = new Sensor(33, 65);
15
16     return view('dashboard', [
17         'sensor' => $sensor
18     ]);
19 });
```

IoT Monitoring Dashboard

Suhu 33°C Status: Normal	Kelembaban 65% Status: Normal
Status Lingkungan Tidak Nyaman 33°C 65%	

© 2025 Kelompok Dafa & Rafi

2. Tambahkan method baru statusLingkungan() yang mengembalikan teks:

- o “Nyaman” jika suhu 20–30 & kelembaban 40–70
- o “Tidak Nyaman” jika di luar range.

```
// Method untuk status lingkungan
0 references | 0 overrides
public function statusLingkungan(): string
{
    if ($this->suhu >= 20 && $this->suhu <= 30 && $this->kelembaban >= 40 && $this->kelembaban <= 70) {
        return "Nyaman";
    } else {
        return "Tidak Nyaman";
    }
}
```

3. Tampilkan hasil statusLingkungan() di bawah card.

```
<div class="bg-white rounded-lg shadow-lg text-center p-8 w-full">
    <h5 class="text-lg font-semibold mb-4">Kelembaban</h5>
    <p class="text-5xl text-blue-600 font-bold mb-2">{{ $sensor->kelembaban }}%</p>
    <p class="text-gray-500">Status: {{ $sensor->StatusKelembaban }}</p>
</div>

<div class="bg-white rounded-lg shadow-lg text-center p-8 w-full">
    <h5 class="text-lg font-semibold mb-4">Status Lingkungan</h5>
    @php
        $warnalingkungan = $sensor->statusLingkungan() === 'Nyaman' ? 'text-green-600' : 'text-red-600';
    @endphp
    <p class="text-5xl font-bold mb-2">{{ $warnalingkungan }}</p>
    <p class="font-bold text-gray-900">{{ $sensor->suhu }}°C {{ $sensor->kelembaban }}%</p>
</div>
```
